Summary

I am a Full-Stack Engineer with strong fundamentals in JavaScript and TypeScript, focusing on the MERN stack and Next.js. I specialize in building robust REST APIs, scalable backend logic with Node.js/Express.js, and dynamic frontends using React functional components, hooks, and state management.

Lately, I've also focused on practical AI integrations, building custom RAG pipelines, vector databases, and reliable backend architectures that solve real business problems. I am highly comfortable working in Agile/Scrum environments with active participation in sprint planning and daily standups.

Beyond just writing code, I consider myself a product builder. I love taking ownership of the entire development cycle, from database schema design and indexing to containerizing apps with Docker and ensuring high code quality through rigorous Git workflows, PRs, and code reviews.

Skills

- **Programming Languages:** JavaScript (ES6+), TypeScript, PHP, C++, Solidity
- **Frontend Development:** React.js, Next.js, Redux, Svelte, Tailwind CSS, Blade
- **Backend Development:** Node.js (Express.js), Laravel, REST APIs, WebSockets, Microservices, SSE
- **Databases & Caching:** MySQL, PostgreSQL, MongoDB (NoSQL), Redis, Supabase
- **Testing & CI/CD:** GitHub for PRs, version control, CI/CD practices
- **Tools & Practices:** DevOps, Docker, Agile/Scrum, Postman
- **Cloud & Deployment:** AWS (S3, SQS, Lambda, EC2), AWS Lightsail, Vercel, Render
- **Mobile :** React Native, Expo,
- **AI & GenAI:** OpenAI API, RAG Pipelines, Vector Embeddings
- **Blockchain/Web3:** Ethereum, Web3.js, Ethers.js, Hardhat, Truffle, Ganache, Smart Contracts
- **Development Tools:** Git, GitHub, Docker, LaTeX, Postman
- **Deployment:** AWS EC2, AWS Lightsail, Vercel, Render, Linode
- **Operating Systems:** Linux

Experience

Red Star Technologies — MERN Stack Developer

G13/4, Islamabad
May 2025 - Present

- Delivered high-quality, client-focused solutions across multiple projects as a MERN and Next.js developer.
- Successfully closed and retained multiple clients through consistent delivery of robust and scalable applications.
- Integrated AI-driven features into various client projects, enhancing functionality and user experience.
- Maintained a strong professional reputation through reliability, technical expertise, and commitment to excellence.

Code Crush — MERN Stack Developer

Satellite Town, Rawalpindi
Nov 2024 - May 2025

- Engineered 4 full-stack web applications utilizing the MERN stack to deliver robust user experiences.
- Constructed RESTful APIs using Express.js, ensuring efficient data exchange with React frontends.
- Architected scalable backend logic incorporating MVC methodologies, TypeScript, and ES modules.

OIRRC — Junior web Developer

JB Tower, Peshawar
June 2024 - Nov 2024

- Authored scalable full-stack applications using **Next.js**, seamlessly managing client-side and server-side business logic.
- Administered relational databases using **PostgreSQL** to guarantee optimized data storage and rapid retrieval.

- Configured **Prisma ORM** for streamlined schema modeling, reliable migrations, and performant backend queries.

Projects

I. Owners Global & Owners Inventory

[Live\(staging\)](#) 

- Architected a multi-app ecosystem where **Owners Global** securely provisions and shares organizational data with the **Owners Inventory** client.
- Constructed the **Owners Inventory** interface leveraging **Laravel** and **Blade** templates for dynamic server-rendered views.
- Integrated Server-Sent Events (SSE) to broadcast real-time progress indicators for extended asynchronous server operations.
- Engineered a custom SSO solution for frictionless authentication, centralizing the core authorization logic in **Node.js** while routing redirection paths via **PHP**.
- Orchestrated secure multi-platform invite workflows and seamlessly hooked into the Stripe payment gateway processing.
- Configured and executed CI/CD deployment pipelines targeting a high-availability production environment on **AWS Lightsail**.
- **Technologies:** PHP, Laravel, Blade, MySQL, Node.js, TypeScript, AWS (Lightsail, S3, SQS).

II. Klic (Streaming Web App)

[Live](#) 

- Restructured both backend and frontend architectures, significantly boosting query performance, overall scalability, and long-term maintainability.
- Diagnosed and eradicated critical production bugs, elevating application stability and maintaining high client retention.
- Established stringent protocols for code quality assurance, strict version control, and automated continuous delivery.
- **Technologies:** Next.js, GraphQL, SCSS, Node.js, TypeScript, Redux, AWS services.

III. Owner Super Admin

[Live](#) 

- Streamlined backend modules for seamless connectivity with remote instances and **AWS RDS** operations leveraging an OOP-based pattern.
- Formulated user impersonation functionalities, greatly expanding administrative oversight and troubleshooting capabilities.
- Enforced industry standards for software quality, repository management, and zero-downtime deployment workflows.
- Troubleshoot pervasive UI components and backend defects, solidifying system reliability for end-users.
- **Technologies:** Next.js, Tailwind CSS, Node.js, TypeScript, Redux, AWS Services.

IV. KolabMe (A health care platform)

[Live](#) 

- Spearheaded a comprehensive telemedicine platform empowering users to schedule physician appointments, update health records, and conduct virtual consultations.
- Incorporated real-time WebSocket messaging to facilitate instant, secure chat interactions between medical professionals and patients.
- Designed an extensive administrative dashboard for centralizing the management of personnel, patient scheduling, and communications.
- **Technologies:** React.js, Node.js, Express.js, Websockets, AWS, Redux.

V. Leyloon

[Live](#) 

- Launched a premium e-commerce platform allowing users to seamlessly browse and customize bespoke moissanite and lab-grown diamond jewelry.
- Programmed a sophisticated visual design engine enabling granular customer selection of stone types, gem shapes, carat sizes, and metals.
- Embedded an **AI jeweler** assistant to interactively guide customers through the personalized

rendering and design life cycle.

- **Technologies:** Next.js, Next.js API Routes, TanStack Query, Radix UI, NodeMailer, Anime.js, Context API, VDB API.

VI. On Point

Live [↗](#)

- Crafted a full-stack web wrapper for IRISCRM, independently orchestrating complex business rules and real-time CRM data integration.
- Scheduled automated background cron jobs via **Inngest** for monthly deal imports and dynamic calculations of sales representative targets.
- Deployed a companion mobile application utilizing **React Native** and **Nativewind**, consuming backend APIs for a seamless cross-device CRM workflow.
- **Technologies:** Next.js, React Native, Nativewind, Inngest, Tailwind CSS, IRIS APIs.

VII. Web base Linux inspired OS

Live [↗](#)

- **Advanced Window Management:** Scripted custom logic to facilitate fluid drag-and-drop mechanics and precise 8-direction window resizing.
- **Terminal Integration:** Embedded Xterm.js to simulate a robust terminal environment supporting standard shell execution and file navigation.
- **AI Assistant:** Integrated a Gemini-powered conversational chatbot to autonomously answer queries regarding my technical expertise.
- **Simulated OS Showcase:** Pioneered a unique, interactive operating system simulation to gamify and exhibit my professional portfolio.
- **Technologies:** Xterm, Svelte, Scss, Gemini API.

VIII. AI-Powered Proposal Generator & Portfolio Assistant

- Architected a RAG-enhanced reasoning system featuring multiple pipelines to autonomously formulate personalized, high-converting client proposals.
- Formulated an asynchronous background ingestion queue using Inngest and OpenAI to distill and vectorize project datasets directly into a Supabase pgvector instance.
- Devised an autonomous Q&A chat interface for semantic portfolio queries, fortified with strict anti-hallucination guardrails and zero-jargon algorithms.
- **Technologies:** Next.js, React 19, Supabase, PostgreSQL, pgvector, OpenAI API, Inngest, Tailwind CSS, shadcn/ui.

IX. Other Notable Projects

- [Nomacal](#) [↗](#) | [CremeXchange](#) [↗](#) | [Govio](#) [↗](#) | [Aram Tours](#) [↗](#) | [E-Help](#) [↗](#)

Education

Bachelor of Computer Science

University of Peshawar

Relevant Coursework: Data Structures, Algorithms, Database Systems, Web Development, Blockchain Fundamentals

2020 – 2024
